Java

```java
class Solution {
    public long maxTotal(int[] value, int[] limit) {

    }
}
```

JavaScript

```javascript
/**
 * @param {number[]} value
 * @param {number[]} limit
 * @return {number}
 */
var maxTotal = function(value, limit) {

};
```

TypeScript

```typescript
function maxTotal(value: number[], limit: number[]): number {

};
```

C++

```cpp
class Solution {
```

```cpp
public:
    long long maxTotal(vector<int>& value, vector<int>& limit) {

    }
};
```

C#

```csharp
public class Solution {
    public long MaxTotal(int[] value, int[] limit) {

    }
}
```

Kotlin

```kotlin
class Solution {
    fun maxTotal(value: IntArray, limit: IntArray): Long {

    }
}
```

Go

```go
func maxTotal(value []int, limit []int) int64 {

}
```
